Direct Fired Profile Plate Specifications:

Description: Direct fired burners shall have patented US Patent No. US6695238B2, self-adjusting profile plates designed to ensure proper air velocity and pressure drop across the burner. Profile plates shall allow burners to achieve clean combustion by lifting by-product levels to a maximum of 50ppm of carbon monoxide (CO), and 50ppm of Nitrogen dioxide (NO2).

Application: Spring-loaded burner profile plates are engineered to automatically react to the momentum of gas flow and pressure drop across the burner. Profile plates are designed to react to pressure drop across the burner.

General Construction: Burner assemblies shall be included in the DF unit's ETL listing and comply with combined safety standards ANSI Z83.4 and CSA 37 (non-re-circulating DF heaters) and ANSI Z83.8 (re-circulating DF heaters).

General Construction: Profile plates shall be formed from G90 galvanized steel. Profile plates shall vary in size per unit. Profile plates shall be mounted along the same plane as the discharge of the burner. Design shall incorporate properly torqued, permanently mounted spring hinges.

Direct Fired DF Profile Plate Assembly
